WEB DESIGN
**Chapter 5 and 6 XHTML**
Graphics and Links

You will be creating an animal information web site utilizing pictures you find on the internet and bio text you gather from the internet. Add the items listed below.

_____ Create 3 notepad pages. One will be your homepage and you should save it as
index.html. The first page will be the introduction to the web site with the
name of the theme and the animals that will be on the next 2 pages. There will
be at least one picture of each animal and a brief description of what the 2 other
pages will contain. The other 2 pages will be on specific animals, complete with graphics (at least 2)
and a bio of that animal. You may save the pages with names that indicate what animal they are about
(tigers.html, snakes.html, etc.)

_____ Include a Doctype on each page and the 4 must have tags (do you remember what they are?)
tag. Also include your name and date in the comments on each page.

_____ The pages are in tables – you may have multiple tables, and the main body does not need borders, but
you should have the table, columns, and rows formatted so the page looks good.

_____ Create a banner for each page using the directions in the creating banners in PowerPoint word document.

_____ Add graphics to all pages (A minimum of 2 per page). The images must be sized in the using height and
width. The images should be close to the same size for consistency on each page.

_____ Wrap text around your graphics on at least one page using the <align> tag.

_____ Add vspace and hspace between the graphic and the wrapped text.

_____ Add an Alt Text Attribute to all your graphics. (The text should give the user information regarding what
the image is about.)

_____ Horizontal Rule on at least one page

_____ Color or image background on all pages

_____ Bold and Italic some text on every page (use this where appropriate).

_____ Use at least 2 different <h> tags (There should be a heading 1 <h1> at the top of the body)

_____ Center text using the <center> tag at least one time.

_____ Use the <pre> tag at least one time with actual formatting that you do not want changed.

_____ Use a list on at least one page.

_____ Create a table with links to each page including the home page. The table should be formatted as well as
the text in table. Change the **background color of the table** so it is different than the color of the page.
This table should be on all 3 pages with a color that may have to be different.

_____ On the home page create **graphic links** to the other 2 pages. These should be the two pictures that you have to introduce what is on page 2 and page 3.

_____ Create a link to an **outside site on pages 2 and 3**. Make sure you use _blank as the target so that it opens in another tab.

_____ Add anchors on the top of the pages to go to each heading you have set up for the 2 animals.

_____ Add an anchor at the bottom of all 3 animal to take you back to the top.

_____ Good use of color – did you use a color scheme from the sites provided (can you read it…does it look good?)

_____ Content (No cut and paste…use your own words) – Are there typos, including missing capitalization.

_____ Creativity and Effort – all the pages do not look the same. There is a different format with the pictures, text, and headings. (**As always, school appropriate!**)
_____ The site was checked by a classmate

_____ **Total Score**

- Make sure you go through the above checklist and check your site to see if you included all the items. (You could also have a friend check it too!)

- Each item is worth 3 points, except for the table which is 4 for a total of 70 points

- If you complete this assignment early, you may add more animals or create other animal pages. We will learn how to link it all together in the next lesson. HAVE FUN!
